### Provide Community Empowerment by Funding Church Construction

#33

Starting Bid **\$6,000.00**

**5 Available**  
**Donated by You!**

Help Community empowerment bringing discipleship, development and transformation to more communities by funding the the construction of a whole church building.

Cost of Church Construction - \$6,000-\$10,000 per Church build

- Our church construction projects have sponsorship from partners, but the difference between the sponsorship and what is actually needed is between \$6,000 - \$10,000 for each church.

- Each church is 9x12 meters in size and seats 200-300 people. It is made of a strong cement concrete foundation, cinder blocks, and is plastered and painted with iron sheets and steel bars – remarkably high quality. There is a construction criterion that is first met: the land must be owned by the church, not by an individual, the pastor must have had Bible college training and the church must have at least 100 adult believing members in order to apply for a church structure.
- This church structure is used as a community center from Monday to Friday, sometimes for a school, village learning center, house of prayer, a youth center, women empowerment training, Bibles studies and/or overnight prayer. It is usually the only permanent structure in a village and that structure becomes the hub of community transformation – seeing the community restored and developed around the centrality of the church.
- When these buildings are built oftentimes the attendance doubles immediately and these permanent buildings put in 3-5 daughter church plants over a period of 5 years. The growth is phenomenal! We call them discipleship factories and the difference between the sponsorship that we receive and what is actually needed for each church structure is between \$6,000 - \$10,000 USD
